Srivishnu Charan Avasarala

AI Generalist | Enterprise Transformation | Platform Modernization |
Ex Verizon Assoc. Director
Hyderabad, Telangana, India

Summary

I've spent 23 years leading technology from every seat at the table — Project Management, Quality Engineering, IT Operations, and Development — and for the last several years, turning that experience toward AI-led transformation. # My career has moved through the full delivery lifecycle: managing card implementation programs for US financial institutions, leading enterprise quality engineering for a 15M+ customer telecom platform, running production operations for systems handling 1M+ daily customer interactions, and most recently — directing AI-enabled engineering transformation as Associate Director at Verizon. # What that's looked like in practice: # Directed a \$14M billing modernization program migrating 45M+ customer accounts with zero customer-impact disruption # Built Agentic SDLC pipelines integrating Jira, GitHub, and MCP-driven automation — cutting testing turnaround time 93% and improving delivery velocity 5x # Took an 18-hour billing batch cycle to under 10 minutes with an on-demand processing platform ## Partnered with executive leadership on AI-driven engineering frameworks that reduced vendor dependency and delivered \$8.8M in annual efficiencies # Led and upskilled distributed engineering organizations of 55+ members # Built a BERT-based triage model that lifted triage efficiency to 91% and pushed auto-resolution to 69% # Sustained 99.32% production quality across mission-critical billing systems and cut per-bill production cost from \$2 to 30 cents across 15M accounts through a mainframe migration # # Outside of enterprise work, I build. In the last 6–8 months, I've independently designed, built, and shipped a range of full-stack applications — a digital library management system, a literacy platform, a trading system, and operational workflow tools — owning everything from architecture to deployment using React, Firebase, Supabase, and API-driven design. It's the same systems discipline I bring at enterprise scale, applied hands-on. What I bring: the delivery rigor of someone who's run programs migrating tens of

millions of accounts, plus the hands-on fluency to build AI-native products myself. I'm looking for what's next at that intersection.

Experience

Verizon

18 years 11 months

Associate Director

July 2024 - May 2026 (1 year 11 months)

Hyderabad

Lead enterprise-scale billing modernization initiative involving migration of 45M + wireless customers from legacy mainframe billing systems to modern open platforms.

Architected AI-enabled parallel billing validation framework ensuring byte-level production accuracy and revenue integrity.

Enabled phased migration through intelligent bill certification and automated validation tooling. Implemented Agentic AI orchestration integrating Billing Applications with Tools like (JIRA, GitHub, databases, mainframe systems, and QTest via MCP to transform SDLC/STLC workflows into autonomous AI-assisted delivery pipelines.

System Modernization – Led a \$14M billing modernization initiative supporting migration readiness for 45M+ customer accounts with reduced business risk.

Speed to Market - Governed Agentic Development Lifecycle pipelines integrating Jira, GitHub, databases, and MCP workflows and Agent Skills, reducing testing turnaround time by 93% and improving delivery velocity by 3x.

AI Led SDLC - Directed AI-enabled automation solutions for TDM, validations, cycle execution, and enterprise health checks using Python Flask, React, and API-driven architectures.

Innovation – Spearheaded development of an on-demand billing platform reducing billing runtime from 18 hours to under 10 minutes for customer self-service.

Strategic Cost Optimization – Partnered with executive leadership to reduce vendor dependency through AI-driven engineering frameworks, contributing 90K in annual operational efficiencies.

GCC Leadership - Directed engineering capacity planning, workflow optimization, and governance across globally distributed GCC engineering organizations.

Senior Information Technology Manager

August 2020 - July 2024 (4 years)

Hyderabad

Managed enterprise production support operations for customer success and sales platforms supporting retail stores, telesales, indirect partners, and contact center operations across the US. Led a 45-member offshore operations team responsible for incident management, outage response, environment health checks, SLA compliance and operational governance.

Directed ITIL service management practices including incident triage, root cause governance, change approvals, and production release coordination.

Triage Efficiency - Architected bidirectional encoder representations from transformers model (BERT) and enhanced triage efficiency to 91%.

AI Ops – Spearheaded cost reduction by improving call deflection by 18% and auto resolution to 69%.

Call volume reduction – Led root cause fixes reducing customer call volume by 6% (20700 calls per day).

Prod stability – Orchestrated automated health checks covering 18 scenarios to decrease release day prod outages by 3% year over year.

Productivity – Governed building a workforce scheduler, reducing ticket assignment time to under 5 min improving mean time to resolve.

RPA - Migrated RPA bots from Automation Anywhere to UiPath and built on several order correction use cases with UiPath.

GRC - Governed adherence to enterprise security, audit, compliance, and operational governance standards across production delivery initiatives.

Information Technology Quality Assurance Manager

July 2007 - August 2020 (13 years 2 months)

Hyderabad

Led agile quality engineering teams of 15+ members responsible for enterprise retail application testing, certification, and production quality governance across Verizon's billing and order management ecosystem. Partnered with business and product teams to improve sprint execution, release quality, and QA transformation initiatives. Orchestrated development of API automation frameworks, production quality improvements, and intelligent billing validation platforms enhancing regression coverage, release quality, revenue assurance, and operational efficiency.

Omni channel experience – Elevated customer channel interaction satisfaction by 42% through the strategic leadership of microservices testing and quality delivery.

Speed to market – Championed the evolution of system testers into E2E QA engineers, cutting release delivery timelines by 25%.

Process Improvement – Architected testing community of practices and built testing north star architecture which aligned all system testers to be a true E2E Tester. Improved tester productivity by 45%.

Lead Technical Analyst

August 2007 - August 2019 (12 years 1 month)

Hyderabad

Drove enterprise testing framework for orchestrated API automation which improved regression test coverage by 40%.

Improved production quality outcomes to 99.32% through continuous improvement, automation-led quality engineering.

Built certification platform capable of finding anomalies, revenue assurance insights, and trend-based alerting which reduced 6% of underbilling and 2% of overbilling issues for 15M customer base.

Led a testing team to rollout of a new 2 page bill pdf format for Verizon Wireline customers for about 15M customers with zero customer disruption.

Spearheaded mainframe migration enabled realization of reduced cost per bill production from \$2 to 30 cents per bill across 15M accounts.

FIS (Formerly EFUNDS International Pvt. Ltd.)

Systems Executive

January 2007 - July 2007 (7 months)

Chennai

As a Project Coordinator for CO-OP Financial Services, I supported US credit unions and financial institutions in securely implementing debit/credit card changes by coordinating thorough testing through the eFUNDS payment gateway, ensuring regulatory compliance, safety, and zero production issues. I managed diverse client requests including new BIN issuance, PIN security enablement, POS terminal testing, ATM relocations, and software vendor changes. I translated requirements into Business Requirements Documents (BRDs), secured stakeholder approvals, and orchestrated cross-functional teams (database, telecom, testing, and account management) to deliver projects successfully from initiation to live implementation

Analyzed client high-level requirements and authored detailed Business Requirements Documents (BRDs) by following structured project management principles, reducing requirement gaps by 8%.

Conducted requirement review calls with clients to secure timely sign-off and freeze scope, reducing delays by 22% on complex projects through clear expectations and early alignment.

Coordinated cross-functional reviews with database, telecom, testing, and account management teams while maintaining clear communication and tracking action items, enabling early risk identification and achieving consensus without surprises.

HCL Technologies BPO Services

Technical Process Trainer

March 2004 - January 2007 (2 years 11 months)

Greater Chennai Area

As a Technical Process Trainer for BT Broadband Internet, I designed and delivered effective training programs for Customer Support Agents on BT products, internet fundamentals, and broadband troubleshooting. I developed improved training methodologies that enabled agents to resolve customer issues faster, resulting in reduced Average Handle Time (AHT) and higher customer satisfaction rates.

Developed efficient training methodologies for BT Broadband Customer Support Agents, reducing Average Handle Time (AHT) from 12 mins to 8 mins.

Designed and delivered targeted process and troubleshooting training, improving First Call Resolution (FCR) by 32% and CSAT scores by 18%.

Enhanced agent performance through structured training programs, increasing the percentage of agents achieving CSAT 3–5 by 22%

MMC Infotech

Processing Executive

August 2003 - March 2004 (8 months)

Chennai

Joined as a processing executive in eSales Division. Responsible for generating daily Loans and credit cards of citi bank. Aggregate the Credit card leads that come from multiple channel partners and send it for processing. Validate the digital commercials of citi bank in multiple websites and run a report on what is working.
